

Midlife Skin Reset Guide

A simple few-day reset for irritated-feeling skin

Use this short guide alongside the article. It keeps the reset practical: reduce variables, watch patterns, and avoid turning every product decision into a guessing game.

Track these signals once a day:\n- Tightness after cleansing\n- Stinging or burning after products\n- Flaking, roughness, or redness\n- Weather, stress, sleep, or product changes\n- What felt calming rather than irritating

For the next few days, keep the routine simple and write down what changes.

Day 1: _____\nDay 2: _____\nDay 3: _____\nDay 4: _____\nDay 5: _____\nDay 6: _____\nDay 7: _____

If irritation is severe, persistent, painful, or rapidly changing, use this as a conversation aid with a qualified clinician rather than as a diagnosis.
