

Dr. Lurie Skin Reset Checklist

A smoke-test downloadable PDF artifact for validating the publishing workflow. This checklist is intentionally compact and non-diagnostic.

Step	What to check
1	Notice whether new irritation follows a product, a routine change, or a stressful skin week.
2	Simplify the routine before adding another active ingredient.
3	Keep sunscreen in the plan and adjust formula, removal, or layering if needed.
4	Track burning, itching, rash-like patterns, or persistent acne changes for clinician review.
5	Book a dermatology visit for symptoms that are painful, spreading, or not improving.

This file is for workflow validation only and is not medical advice.
